CHECKPOINT: ACTIVE DEFENCE

This checkpoint is about implementing endpoint protection using the active directory tools. I am trying to implement rules and strict password policy on how each user creates passwords and any unusual login apart from the rules will be detected.

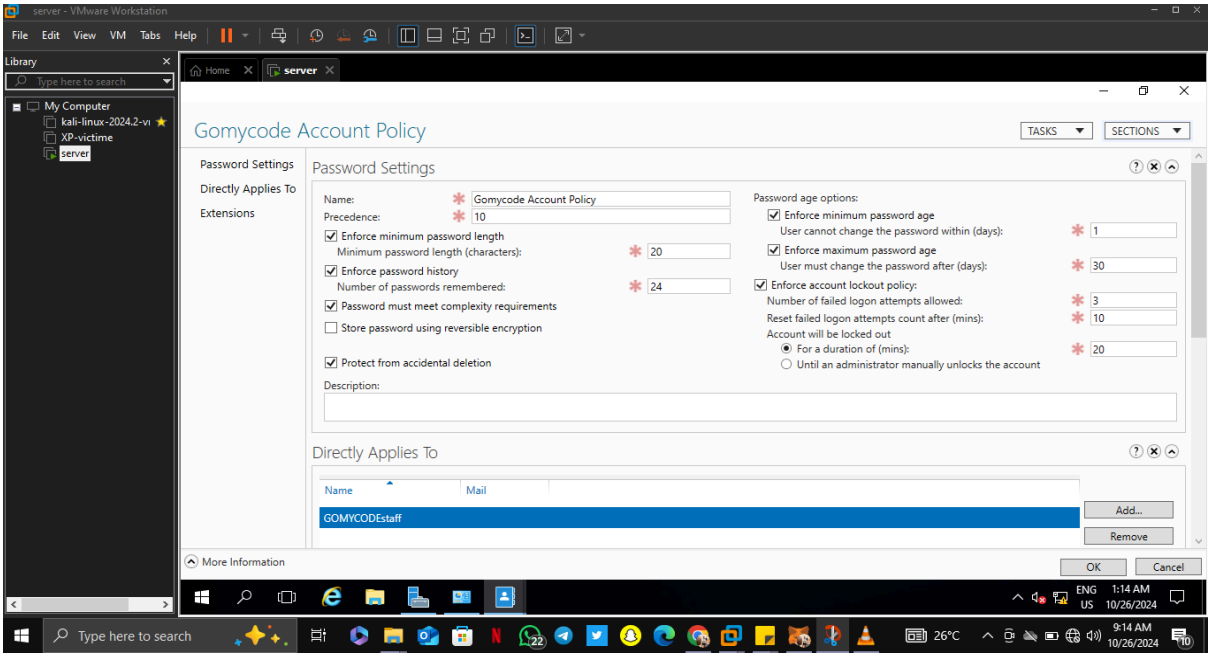

So, we need to create a folder named GOMYCODEstaff from the Active Directory Users and Computers.
First, log into the window server - tools - Active Directory Users and Computers: (create a GOMYCODEstaff folder.)

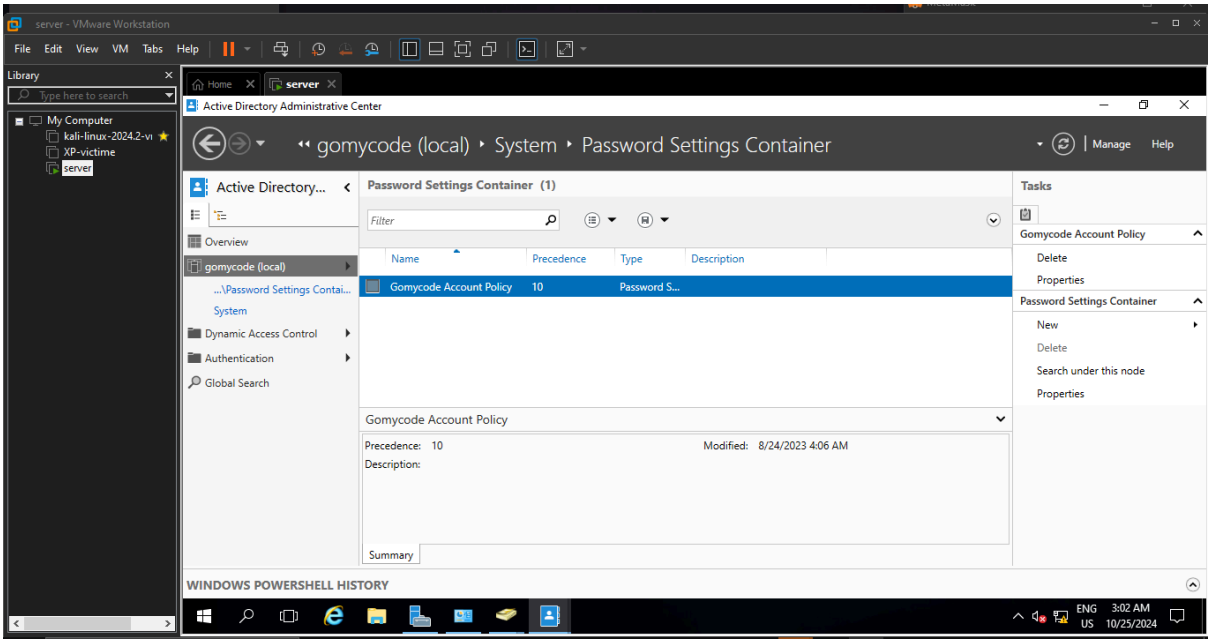

Now, to set up the password policies
Goto- tools- Active Directory Administrative Center: (Gomycode (local) -system-Password settings)
Setting the policies

- All IT staff privileged accounts must contain a minimum of 20 characters and be complex.
- Passwords must be changed every 30 days. Passwords may not be changed more than once per day and the 24 most recent passwords cannot be repeated.
- IT staff-privileged accounts are subject to an account lockout policy, with a maximum of three failed login attempts allowed. Accounts will be locked out for a duration of 20 minutes. Reset failed attempts after 10 minutes.
- click on add
- type GOMYCODEstaff in the enter the object names to select

See image below.

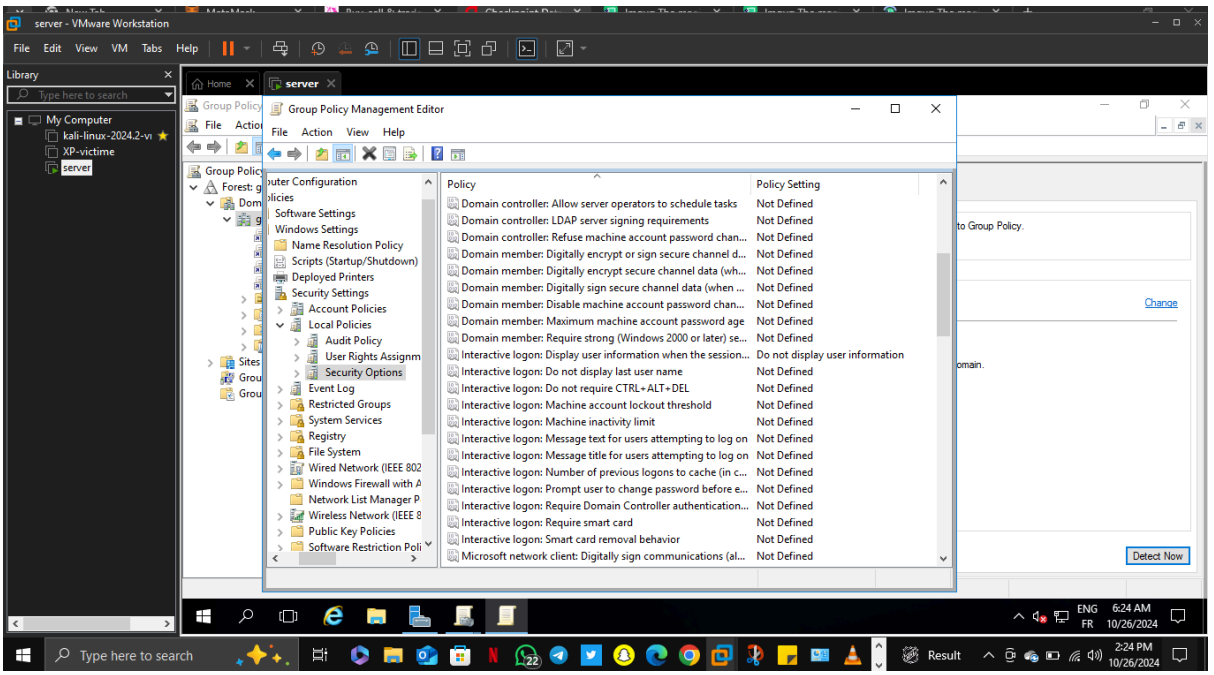

After clicking okay this is the outcome in the image below.

Next is to:
go to tools → group policy management
Name the GPO : SecureAdminWorkstation :
Edit the GPO : (right click + edit):

- Select Computer Configuration → Policies → Windows Settings → security settings → Local Policies →Security Options
- Now you can disable Guest Accounts
- change the Administrator account
- choose to not display the last user name in an interactive log-on
